Continues ...

CONTINUUM is back!

ParaNet's newsletter of UFOlogy, online communications, paranormal studies and research is resuming publication.

An exciting forum for an array of interests -- and a handy resource for finding:

- Current UFO events and symposia
- Computer bulletin boards
- Study groups
- Contact groups
- Researchers and research organizations
- Writers and more.

Complimentary copies of CONTINUUM's premiere issue will be available to ParaNet participants and other interested parties for the price of postage.

Thereafter, CONTINUUM will be available by subscription only, mailed First Class within the U.S. Please inquire via NetMail for more information and subscription rates, including overseas rates.

Send mail to:

- * ParaNet Alpha 1-303-431-8797 -- address echomail to Michael Corbin at
9:9/0 (ParaNet) or
1:104/422 (Fido) or
mcorbin@scicom.alphacdc.com (Internet)
- * ParaNet Pi 1-201-451-3063 -- address echomail to Clark Matthews at
9:1012/4 (ParaNet) or
1:107/816 (FidoNet) or

P.O. Box 3934, Jersey City, NJ 07303-3934

CONTINUUM is back!

ParaNet's newsletter of UF0logy, research, online communications, and
paranormal studies is resuming publication -- and calling for
submissions.

We are seeking articles of 500 to 3000 words for the premiere issue,
which is scheduled for publication in July 1991.

Publication will be quarterly. Payment will be in copies.

*** S U B M I S S I O N D E A D L I N E ***

Send submissions to:

Clark Matthews
The Wrong Number BBS
P.O. Box 3934
Jersey City, NJ 07303-3934

*** E D I T O R I A L S U B M I S S I O N S ***

SUBMIT ANYTHING!

We don't PROMISE to publish it, but if your topic interests you as a UFO buff, we think it's a safe bet that others in our "circle" will share your interest.

Science fiction. Science fact. UFO/paranormal history. Scaly-eyed skepticism. A book review. A television critique. An interview. The results of your last physics experiment. You name it: If it interests you, it will probably interest us and your compeers here. And it's welcome in CONTINUUM.

Registered copyrighted material will be protected but we do assume a grant of non-exclusive serial rights from you, the author, upon submission and before delivery of complimentary copies. You must inform us of other, pending rights sales upon submission. Likewise, if you submit work-in-progress, your unpublished copyright will be respected but a grant of non-exclusive serial rights is expected in exchange for editorial and development work and before the delivery of complimentary copies. (Heck, we might even improve it!)

*** P L A N N E D T O P I C S ***

Planned articles in the coming issue include:

- * The Fatima Enigma
- * Online listening post -- best of the ParaNet echoes
- * The Philadelphia Experiment: Build It in Your Basement?!
- * ParaNet -- 5 years and counting...
- * UFO History
- * UFO current events
- * Handy UFO classifieds
- * And more...

*** M A G A Z I N E H I G H L I G H T S ***

- * Free classified public notices of:
 - UFO events and symposia
 - Computer bulletin boards

- Study groups
- Contact groups
- Researchers and research organizations
- Writers and more.

Maximum ad length 40 words, including address and zip code. Dues-based membership organizations and sponsors of symposia may advertise, but free classified ads cannot offer anything for sale.

Space for free classifieds is limited, and the offer does not apply to display advertising. The management reserves the right not to publish ads.

It's definitely "un-commercial", but we're committed to keeping the the "bulletin board" concept alive in the UFOlogical community. So we want CONTINUUM to be a helpful resource for its readers -- just like ParaNet is for its users. What goes around, comes around, in other words.

Complimentary copies of CONTINUUM's premiere issue will be available to ParaNet participants and other interested parties for the price of postage.

Thereafter, CONTINUUM will be available by subscription only, mailed First Class within the U.S. Please inquire via NetMail for more information and subscription rates, including overseas rates.

Mike:

Its my understanding from past discussions of this very article, that this issue is (so far, at least) non-existent. It seems that it might be the first urban legend of the Information Age. It has come up several times before on other echoes, and the word is that no such article has ever appeared in the New York Times, and that the FCC is not considering such a move. That's my recollection, anyway. Perhaps someone else could track this down more thoroughly for us.

--THERE IS MORE GOING ON THAN OUR SENSES PERCEIVE--

Our view of the world is primarily made up of what we have perceived through our five senses. What we personally know of the world we have either seen, touched, tasted, smelled or heard.

Unfortunately, our senses are limited, therefore our view of the world is limited. This is not a problem unless we start believing that what we perceive is all there is to be perceived. IT IS NOT!

Hi Clark... This is Jerry, I cannot understand why you are having a problem

with ZMail.. I am using ZMailQ 1.12 over here, and it runs fine... in a year and a half of using it, I have had only one BADPKT.000, and I am not convinced that it was ZMailQ's fault. I am sending this to you as I have access to the offline reader (Msged/Q 1.52b) and Elizabeth does not... Hope that you have better success with this message.

Hello Jerry & thanks for the replay of the message. Please tell Elizabeth that I will contact Ft. Smith Chamber of Commerce to see what (if anything) gives in the park.

To this day, I am confounded by what happened with my ZmailH 1.14 routines. They worked splendidly until about 2 weeks ago. I had some very useful, custom NODE and MAP statements that all worked fine. Then it started tossing every message into Bad Messages. I get my feed from 9/0, where nothing was changed. It continued to work with Fido, but 95% of my traffic is ParaNet, so I had to bail out of Zmail in the interest of keeping the echos echoing.

I have just completed the migration to Imail 1.10 and am now experiencing no problems whatever. In fact, Imail managed to recover many, many bad messages and posted them correctly. It's an excellent program, extremely zone-smart, and it sets up with menus that are almost foolproof (I am living proof of the foolproofness).

So far, so good...

Best,
Clark

From: amix.commodore.com!vanth!jms
Subject: Malcolm Puddy
Date: 4 Apr 91 06:32:26 GMT

From: vanth!jms@amix.commodore.com (Jim Shaffer)

Does anyone know anything about someone named Malcolm Puddy? He was a British scientist who filed patents for something he called a 'stardrive.' The government terminated his patents and he later committed suicide. This was all just last year, but I only heard about it last week.

The patents were titled 'Stardrive Type 1A' and "Stardrive Type 1B" and were registered in London on 1 October 1990 and 23 October 1990 respectively. One of the patent numbers was 9021280. The patents were terminated on 21 November 1990. I've been told that this means that the patents aren't even available to the public, and that it quite often means that the Ministry Of Defence is interested in them.

That, unfortunately, is all I've heard, and all the person who told me has heard (despite the fact that he lives in England.) The implication was that Puddy was the latest in the series of mysterious deaths in England, but I can't remember if the company he worked for was mentioned (or if he worked for a company at all.) I have no idea what was meant by 'stardrive,' or what the circumstances of his death were.

From: amix.commodore.com!vanth!jms
Subject: Resonant Coil Implications?
Date: 4 Apr 91 07:00:21 GMT

From: vanth!jms@amix.commodore.com (Jim Shaffer)

(I'm catching up on some old mail, so I'll be quoting old articles in the
next few messages.)

+From: vm1.yorku.ca!YSCS1296

+

+I am not well-versed in physics higher than high-school levels. Can
+someone tell me exactly what can happen within the distorted space-time
+that this Resonant Coil produces? What are the implications? I suppose
+this ISN'T an anti-gravity device? Is it a pathway to ... folding space?

Let me start by saying that my physics isn't much better than yours -- but
then, some of this technology isn't accepted by current physics anyway!
Also, I haven't built anything like this.

OK, now, the way I understand it, although you could probably produce an
antigravity field with this coil, everything I've heard seems to indicate
that such a coil is supposed to be able to modify the fundamental
characteristics of matter itself. The power supply connected *between* the
two coils, with a strong dielectric separating them, seems to suggest the
Biefeld-Brown effect, which appears to be a unidirectional gravitational
force. But you can do that without coils. It's the fact that there's also
a magnetic field involved, not just an electric one, that suggests to me
that the coil does far more than generate gravity.

+Of course, it would help if someone(s) actually built it, and reported
+on it.

Well, it would cost a lot of money, and use a lot of power, and as Clark
said, there are rumors that it's dangerous. Even if it didn't do anything
bizarre, it would probably cause problems.

Also, if anyone is thinking about building one, I've heard that the plans
for the power supplies are questionable. I haven't analyzed them myself.
But get somebody who knows what they're doing to look at them. (Don't show
them the rest of the file though!)

+What about the anti-gravity device mentioned in the KRILL (eek) docs?
+Any substance to that claim?

I've heard it mentioned outside the Krill paper, but again I've never been
fortunate enough to see anything like it in operation.

I haven't looked at it for a while, but the Searle device seems to resemble
an N-Machine. The N-Machine isn't an antigravity device, it's a
free-energy device. (In fact, the way I understand it, it's 'just' a
Faraday homopolar generator with a higher-than-100% efficiency.) But the
basic concept seems similar, and the Searle device is obviously generating
a lot of free energy. I don't know why it levitates -- whether it's just
an electrostatic or electromagnetic effect, or whether it's doing something
'strange.'

From: well.sf.ca.us!ddrasin
Subject: Serios Business
Date: 4 Apr 91 07:02:08 GMT

From: ddrasin@well.sf.ca.us (Dan Drasin)

Re: THE WORLD OF TED SERIOS (*Second* Edition), by Jule Eisenbud, M. D., (C) 1989, published by McFarland & Co., Inc, Box 611, Jefferson, NC 28640.

+ I loved the rest of your message, but could you encapsulate for us
+ just how Eisenbud overcomes the 'serios' charge <groan!> that
+ Serios used a 'gizmo' to create the "psychic photos"? It was my
+ understanding that whenever Serios was persuaded (usually with
+ great difficulty) to give up the gizmo (a cylinder in which it was
+ alleged he secreted small photographic slides), that he was
+ consistently unable to 'perform'.

Jim, you really have to read the book. The 'gizmo' (usually a small, hollow cardboard tube) was evidently a kind of psychological crutch; in **all** the years of research no one **ever** caught Serios with any kind of device that could remotely explain the phenomena -- results that were documented over and over and over by staff of the U. of CO Medical School and others. In the end there was not a grain of evidence for fraud, and many hundreds of photographs as evidence of Serios' 'talents.' One of the key evidential factors was the **distortions** of space and time in many of the photos -- 'dream-like' or "imagination-like" distortions and seamless composite images that positively could not have been faked by any mechanical means under the circumstances. Also, many photos were made with the cameras at quite some distance from Serios, and in the hands of the investigators. Some of the pictures appeared as if taken from 'impossible' angles; from places where the cameras had never been positioned. There's more, too. **Much** more. Including a lot of pictures not previously published.

In the book, Eisenbud spends considerable time dealing with the questions of belief/disbelief, scientific integrity, and attacks by the popular press (notably, Popular Photography magazine) and of course our old friend James Randi. Except for Eisenbud's annoying tendency to indulge in encyclopedic, run-on sentences, the book is a **very** good read.

If I could recommend only one book to our kneejerk skeptic friends, this one would be it by a country mile.

***** (Five stars. Highly Recommended.)

From: GBL

There have been several requests for research done into the areas of the paranormal/psychic phenomena. I forgot that I know of an excellent book on the subject.

A woman named Shafica Karagulla, M.D. wrote a book called
'Breakthrough to Creativity.'

DeVorss & Co.

P.O. Box 550

Marina Del Ray, CA 90291

1977

(This address is old so I don't know if it still works.)

She is a highly-respected neuro-psychiatrist who did research into psychiatric treatments. She was to head one of the preeminent research institutes in the nation, if not the world, when a friend gave her a book about Edgar Cayce, 'Edgar Cayce, Mystery Man of Miracles. She was impressed/confused by Edgar Cayce's ability to do things such as remote viewing because she knew the brain very well (she thought) and could not find a mechanism whereby a human could do such a thing.

This set her off on a personal study of psychic phenomena. She found many subjects (people) which she referred to as 'sensitives' who could do remote viewing and other 'impossible' things. She found doctors who could see a patient's aura and determine what was wrong before any conventional diagnosis was necessary. In order to not be labeled eccentric or worse, the doctors would do the required tests that would prove what they already knew/felt. Other interesting examples were of people who had special talents but did not know it. One was a woman who, when you would describe a place to her such as the Great Wall, would get an image of the place which would match perfectly the real appearance of the location. She thought that everyone could do that so didn't think anything of this rare ability.

Many other studies were done. This woman gave up an important position within her field to fund these studies with her own money and stopped working so she had no source of outside income. The book is an objective account of her work.

Sincerely,

Greg Lush (lush@ecn.purdue.edu)
